

The testing strategy that can be used for Shopease website are

1. Functional testing-to test if all the required functionality are present or not
2. Performance testing- to check the performance of the system
3. Load testing- to test the website when lot of information is loaded onto the screen
4. Cross browser testing- check if it works on all the browsers
5. Security testing- to test if the login credentials provided is safe
6. Stress testing- to check if it can handle a large number of users
7. Usability testing- to test if it is user friendly.
